# SPINNING HELICOPTER

WHAT YOU NEED

- » Template
- » Scissors
- » Paper clip

WHAT TO DO

1. Cut out the template out along the solid lines. Do not cut along the dotted lines.

2. Fold the wings away from each other along the dotted lines.

3. Fold the sides of the helicopter body in to the centre.

4. On the helicopter body, fold up about 1 cm of the end. Use a paper clip to hold this fold.

5. Throw your helicopter into the air or drop it from a high place.

WHAT'S HAPPENING?

As gravity pulls the paper helicopter toward the ground, air pushes up against the wings causing them to bend slightly. As the air passes the bent wings, it pushes the wings sideways, and makes the helicopter spin.
